

Service Station 300

Quick filling solution for large scrubber driers

Key features

- Greatly increased productivity
- Cut of operating cost
- Easy to install and simple to use

Greatly increased productivity

The new Service Station 300 reduces the time consuming filling of scrubber driers with big tank volume dramatically. The 300 litre water tank allows filling of more than only one machine which is leading to significant time savings, especially in areas where more than one scrubber drier is needed for your cleaning task.

Cut of operating cost

The time consuming filling of large scrubber driers is adding up to the labour cost as operators do need to wait until the tank is filled. Service Station 300 may reduce the filling time by 90% or more, depending on water pressure at the site.

Easy to install and simple to use

Service Station 300 is a detachable quick filling stand type with 300 litre tank which is very easy to transport and installed within a very short time. The very flat system allows installment in areas with very limited space and does not need any access to electricity. Also the use of the Service Station 300 is very ergonomic and easy and does not require any operator training.

Service Station 300

Technical data			
Height – tank top	2237 mm	Tank size	300 L
Height – top of mounting bracket	2275 mm	Length of filling hose with nozzle	500 mm
Tank length – without water connection plug	1140 mm	Flow rate	150-160 L/min
Tank length – with water connection plug	1178 mm	Net weight incl. filling hose with nozzle (empty tank)	55kg
Frame length	1130 mm	Material of main parts (tank and frame)	Stainless steel
Tank width	600 mm		
Frame width	536 mm		

The above data is typical of normal production and should not be taken as a specification.
