

TASKI[®] The **ULTIMATE**
Cleaning Machines

Dry Steam

What is a steam cleaner?

A steam cleaner is an appliance that uses only a little water and a little electricity to clean & sanitise virtually any surface – without the need for chemicals.

How does it work?

Using only a small amount of clean, cold tap water, a steam cleaner creates low moisture vapour that transfers heat to the surface you wish to treat. The heat combined with light agitation does the work. In combination with a wide variety of accessories it can be used in an unlimited number of applications.

What is dry steam vapour?

Steam is called 'dry' if it only contains around 5% to 6% water and is much less dense than the air we breathe. It is mess free with temperatures high enough to kill or inhibit microorganisms, emulsify grease and oil as well as other surface contaminants. The result: a completely hygienic and dry surface.

What can I use steam upon?

Dry steam cleaning can be used on practically any surface with the exception of those surfaces that are extremely heat sensitive. Surfaces such as silks, some very thin plastics, and some types of velour upholstery must be treated with great care.

Steam against COVID-19*

Research has shown that a related coronavirus that causes SARS can be killed by temperatures above 56°C or 132°F (hotter than even a bath scalding enough to cause injury) at a rate of about 10,000 viral particles every 15 minutes.

Key Features

High temperature dry steam system for deep cleaning & sanitising

Quality & robust construction for the professional market

Safe & continuous fill boiler

Efficient & low use of water and without the need for chemicals

Comprehensive accessories included

Powerful 4.5 & 8 Bar consistent powerful pressure

Hospitality & leisure - Guest Rooms

- Clean and sanitize mattresses, furniture, curtains and carpets.
- Kill dust mites and remove allergens for a healthier indoor environment.
- Removes spots and stains from bedding, carpets and upholstery.
- Quickly and easily deep cleans furniture to make rooms sparkle.

Healthcare – wards and patient rooms

- Clean and sanitize hospital beds, mattresses, furniture, curtains and carpets.
- Quickly and easily deep cleans furniture, fixtures and fittings

All sector kitchens

- Reduce opportunities for contamination in food preparation areas by cleaning and sanitizing in one easy step.
- Polish and clean stainless steel counters, walls and appliances.
- Dissolve grease on ovens, stovetops and burners with ease.
- Removes baked and burnt on grease from cooking areas, pots, pans and other problem areas.
- Spend less time and less effort cleaning hoods, vents, ceilings and walls.
- Refrigerators, freezers and coolers are deep cleaned and sanitized in one easy process.

All sector washrooms & bathrooms

- Clean tile, grout and shower doors with ease.
- Easily reaches cracks and crevices other cleaning methods cannot reach.
- Clean and restore bathtub bottoms and shower floors so that their colour.
- Drive dirt and germs from hard to reach areas such as gaskets, cracks and crevices

TASKI[®]

The **ULTIMATE**
Cleaning Machines

TASKI is one of four core areas of the Diversey business.

Diversey has been, and always will be, a pioneer and facilitator for life. We constantly deliver revolutionary cleaning and hygiene technologies that provide total confidence to our customers across all of our global sectors. Headquartered in Fort Mill, South Carolina, USA, Diversey employs approximately 8,800 people globally, generating net sales of approximately \$2.7 billion in 2018.
